                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Brain Res. Mol. Brain Res. (1998) In press 2 (bases 1 to 977) Gauer, F., Schuster, C., Pevet, P. and Masson-Pevet, M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          l'Universite, Strasbourg 67000, This record contains 323 individual sequencing reads that have not been assembled into sequencing reads that used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be generated and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (21-0071949) Whitehead Institute/MIT Sector for Sectors for Sectors for Sectors for Sectors for Jul 13, 2000 this sequence version replaced qi.0539385.
All repeats were identified using RepeatMasker.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Freeptor, which is a membrane protein, coupled to guanine nucleotide Finding proteins (6 proteins). The gene has been cloned by polymerase chain reaction amplification of human genomic DNA, using primers derived from the Xenopus larvis melatonin receptor sequence (709947), and use of the product as a probe to obtain clone 709049. Screening of a human hypothalamus chan library has resulted in isolation of the full-length clone. Primers 709955-56 amplify a 1801ation of the dene, and have been used with probe 709962 to analyse the tissue distribution of this gene for comparison with the melatonin-b receptor environments of Section and the melatonin, or specific antibodies, may be used as receptor-agonists may be used as the company of circular reverbor-approach as soft-length described the theorem.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists make used to control the initiation or timing of puberty in humans. The receptor dene may also be expressed in a transgenic animal for use as a model system to screen agunists and antagonists.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This DNA encodes a human melatonin receptor mel-la. The invention provides materials for screening for a substance showing affinity for a melatonin receptor protein, which comprises an animal cell containing an expression plasmid for the gene encoding a human melatonin receptor protein. The cells are useful for screening for human melatonin receptor proteins and its agonist or antagonist er hormones and synthetic compounds, by measuring changes in metabolic activity. The recombinant human melatonin receptor protein is useful as it has the same activity as natural human melatonin receptor protein. The new screening method is better than prior art radioimmunoassay techniques at quantitatively determining melatonin, which uses antibodies produced by linking melatonin to a carrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1053 BF 219 A. 312

This segretor represents the scaling sequence for the house relation receptor protein. This sequence is used in an expression vector designated parks, having the produce the chinese hamster overy (CHO) calls of the invention. The CHO calls express the human melatonin receptor protein, and can be used to identify compounds (such as agonists and antagonists) having affinity to the receptor. The CHO calls can also be used to produce the receptor. The

                                                                                                                                                            The sequence encodes a fragment of a human high-affinity melatonin-la receptor, which is a membrane protein, coupled to guanine nucleotide binding proteins (G-proteins). The coding sequence corresponds to the region downstream of the first intron. The gene has been cloned by polymerase chain reaction amplification of human genomic DNA, using primers derived from the Kenpus laevis melatonin receptor sequence (T09947), and use of the product as a probe on a human genome library in phage EMBL-3 under high stringency. The 5'-portion of the gene has been obtained by repushing the DNA library at low stringency, and the complete sequence is given in T09950. Receptor tragments which interact with melatonin, or specific antiboding, may be used is the complete sequence in the sequence of the gene has been obtained by repushing the DNA library at low stringency, and the complete sequence is given in T09950. Receptor tragments which interact with

```
transcription-polymerase chain reaction amplification of sheep pars tuberalis mpNA, using primers derived from the xonopus laevis melatonin receptor sequence (T09947), and use of the product as a probe on a sheep pars tuberalls cDNA library and a sheep genomic library, to obtain the complete sequence as a hybrid fusion with a 5'-genomic sequence and a 3'-cDNA sequence as a hybrid fusion with a 5'-genomic sequence and a 3'-cDNA sequence as a hybrid fusion with a 5'-genomic sequence and a 3'-cDNA sequence as a hybrid fusion with a 1'-consist sequence as a hybrid fusion of the sequence as a hybrid fusion of the sequence as a hybrid fusion of the action of the sequence as a sequence as a hybrid fusion of the action of the sequence as a sequ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              melatonin receptor agonist, melatonin receptor antagonist; clircadian rhythm disorder; jet law; day-might bylle disorder; ovulation, reproductive cycle; animal breeding; puberty; antibody, transgenic animal; drug screening; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TWA encoding high affinity melatonin to beptor the roused to identify receptor agonists or antagonists e.g. for regulating circadian rhythm disorders or reproductive cycles
Sequence like mi.
                                                         animal for use as a model system to screen agonists and antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                               which is a membrane protein, coupled to guanine vucleotide is proteins (G-proteins). The gene has been cloned by reverse

                                                                                                                                                                                                                                                                                                                                   proteins (G-proteins). The gene has been cloned by reverse transcription spilmerase chair reaction amplification of mouse R2-2 mRNA. The corresponding genomic DNA consists of 2 exons divided by a large (over 8 kb) intron. The 3'-untranslated region is 444 bp long, and includes the polyadenylation signal AUDAAA. A major transcription start site is located about 100 bp upstream of the initiation codon. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists or receptor-antagonists. Agonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Autagonists may be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                melatonin receptor-agonist; melatonin receptor-antagonist; circadian rhythm disorder; jet-lag; day-night cyrle disorder; ovulation; reproductive cycle; animal breeding; puberty; antibody; transgenic animal; drug screening; ds.

                                                                                                             receptor gene. A claimed needed acid (1) comprises a functional meditorin la receptor gene promoter (II) linked to a reporter gene. Cells containing (I) are used to screen compounds (A) for gene le containing (I) are used to screen compounds (A) for ability to alter transcription from (II) (claimed). (A) that are activators are useful for treating circadian by the disorders in humans (e.g. jet lag, sleep-wake disturbances in the blind or regulation of courties are very large of country) and for control of the reproductive cycle in seasonally breeding animals, while those that are inhibitors are used to control initiation and timing of puberty in humans. Screening for (A) can now be done in cultures of transformed cells which do not naturally express the receptor (which is naturally localised to a few specific sites in the central nervous
                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid comprising melaturin la teceptor promoter and reporter gene oused to transform cells for screening for agents that alter transcription from promoter, e.g. for correcting circadian rhythm disorders or controlling reproduction in animals
                                                                                                                                                                                                                                                                                          This INA sequence comprises the gene coding for mouse melatonin la (Mella) receptor (see W23958). A 466 by fragment of the gene was closed from genemic INA by FFR, and was used to probe a BALB/C adult mouse liver EMBL3 SP6/T7 genomic library to isolate the Mella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CDS

which is a membrane protein, coupled to quantile nucleotide binding competents (G-proteins), and has been cloned by PCR amplification of CD human genomic DNA, using primers based on the 3rd and 6th transmerbrane demains of the Xencrus sequence (T09047), then screening of a human brain cDNA library. The genomic Sequence has CC an intron of about 9.0 kb in the 1st cytoplasmic loop region. CC cll hybrids has been used to localize the human MNTRIB gene to CC chromosome liq1:21. Frimers T0995:5; and frich T0041 have been used to analyse tissue distribution. Property flagments which CC interact with melatonin, or specific antibodies, may be used as 1 creeptor agonists or receptor antagonists. Agonists may be used in theract of disorders, to control ovulation, or in alteration of the productive cycles in seasonally breeding animals. Antagonists may be used as 1 creeptoductive cycles in seasonally breeding animals. Antagonists may be used in 2 receptor gene may also be expressed in a transgenic animal for use as a model system to screen agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-JUN-1995;
